

Declaration on REACH Implementation

REACH is the Regulation concerned with chemical substance registration, evaluation, authorization and restriction. REACH Regulation has been carried out from June 1, 2008. According to REACH regulation and its Article 33 definition, Hongfa relay belongs to the Article Category. Based on our knowledge on REACH regulation, we would like to explain as per below:

I. The substances contained in Hongfa relays which are supplied to you would not be released during normal use and application. That means according to REACH Article 7.1 it is not necessary for Hongfa to make registration for our relays.

II. According to REACH Article 7.2, if the content of SVHC (Substances of Very High Concern) contained in any product is higher than 0.1% and the annual importing volume into the countries of the European Community is over 1 ton, it has to be registered to ECHA (European Chemical Agency). The SVHC list is updated regularly.

III. Hongfa is aware of its responsibility according to REACH regulation article 33 1907/2006/EG to check each time when an updated SVHC list is published that such chemicals are not added or used intentionally in the relay production process.

A work process is set up at Hongfa to pay continuous attention to any updates on the SVHC list and on the situation of materials used in our relays. If any of the listed SVHC substances is contained in our products and the content is over 0.1%, Hongfa will register this product at ECHA and inform our customer accordingly about the details.

To simplify this process we will not publish further statements about REACH conformity as long as our products are in accordance with the regulation.
