Display range selection and Operation charts

- ① Select one among ×1, ×0.1, RPS by SW2.
- ② Shift SW 1 to RESET.
- ③ Select one again between RPM/RPS and Hz by SW1.
- ⊗ When display range and unit in front display panel do not conform, move SW 1 to RESET and select RPM/RPS or Hz again.

⊗ 1. It implements predictive operation for period without auto zero time setting function(if there is no pulse input within setting time, it displays the value as zero forcibly). If there is any input signal within certain time(T2), CPU considers input to be supplied, display value is decreased continuously.

Operation mode(frequency/revolution)

⊗ Frequency (Hz, 0.1Hz) = f, Revolution(RPM, 0.1RPM) = f × 60, Revolution (RPS) = f

Display value	Frequency	Revolution
Display unit	Hz 0.1Hz	RPM 0.1RPM RPS(factory default)

Connections

Functions

- **RESET**
It initializes a unit and front LCD display. There are not indicated when set SW1 as RESET.
- **HOLD**
It stops display value by short circuit HOLD terminal when it is hard to read the value because of frequent input changes.

Case detachment and Battery replacement
