1. IDENTIFICATION OF THE SUBSTANCE / PREPARATION AND OF THE COMPANY / UNDERTAKING

Trade name	Valve Regulated Lead Acid Battery
Relevant identified uses	Rechargeable Storage Batteries
Company / identification	Taiwan Yuasa Battery Co., Ltd.
Address	No.11, Ln. 227, Fuying Rd., Xinzhuang District, New Taipei City, Taiwan
Emergency telephone	886-2-29018261

2. HAZARDS IDENTIFICATION

Classification of the s	ubstance or mixture		
Classification accordi	ng to Regulation (EC) No 1272/2008 [CLP/GHS]		
Charging a battery generates hydrogen and oxygen gases.		en gases.	
Hazardousness	Exposure of fire to them may catch a fire , resulti	ng in an explosion.	
Poisonousness	Exposure of electrolyte to skin or an eye may res	xposure of electrolyte to skin or an eye may result in a burn or a loss of eyesight.	
	Lead	Sulfuric acid	
Hazard classificatio	exposure (Category 1) Hazardous to the aquatic environment, chronic	Acute toxicity, oral (Category 5) Acute toxicity, inhalation (Category 2) Corrosive to metals (Category 1) Skin corrosion/irritation (Category 1) Serious eye damage/eye irritation(Category 1)	
Pictogram	toxicity (Category 1)		
	Health hazard Environment	Corrosion Skull and crossbones	
Signal word	Danger	Danger	
Hazard statement(s H314	or repeated exposure Very toxic to aquatic life with long lasting effects	Causes severe skin burns and eye damage	
Precautionary statement(s)	 P403 Store in a well-ventilated place P309+P311 IF exposed or if you feel unwell : Get medical advice/attention. P501 Dispose of contents/container to an approved waste disposal plant. 	P280 Wear protective gloves/ protective clothing/ eye protection/ face protection P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing	

3. COMPOSITION / INFORMATION ON INGREDIENTS

Identification of substance

Identification of single - or mixed substance product : Mixed-substance product

Page

Revised : 2014.09.19

Components	Compositions	Approximate%	CAS Number
Dista	Lead and lead compounds (Pb & PbO ₂)	65-75%	7439-92-1 (Pb)
Plate	Barium compound (Ba ⁺⁺)	0.3% or below	7440-39-3 (Ba)
Electrolyte	abt. 40% dilute sulfuric acid $(H_2SO_4+H_2O)$	15-25%	7664-93-9
Detter / container /	ABS resin (synthetic resin)	5-15%	9003-56-9
Battery container / Cover	Antimony trioxide (Sb ₂ O ₃)	2% or below	1309-64-4
	Tetrabromobisphenol A	4% or below	79-94-7
Separator	Glass Fiber	1-3%	65997-17-3
Other metal parts	Brass etc.	1% or below	63338-02-3
	PP		9003-07-0
Other resin parts	Epoyu rogin	1-5%	25068-38-6
	Epoxy resin		00108-95-2
	Rubber		25038-36-2

4. FIRST AID MEASURES

When electrolyte is	Move to a place full of fresh air and have immediate medical treatment.	
inhaled		
When electrolyte is	Immediately rinse the mouth with a large quantity of fresh water \cdot and drink another large	
swallowed	quantity of fresh water. Then , have immediate medical treatment.	
When electrolyte is	Immediately wash it down with a large quantity of water, and thoroughly wash the skin with	
attached to skin	soap. If there is a fear of burn \cdot have immediate medical treatment.	
When electrolyte contacts	Immediately flush the eye sufficiently with water , and have immediate medical treatme	
the eyes		

5. FIRE-FIGHTING MEASURES Fire fighting method Extinguish a fire using a fire extinguisher of dry powder agent , foam agent or non-combustible gas.

6. ACCIDENTAL RELEASE MEASURES

Action at The Time of Electrolyte Leak or Outflow :

Neutralize the leaked electrolyte with soda bicarbonate or slaked lime , then wash it down. (At that time, be sure to wear protective goggles, gloves, and boots.)

7. HANDLING AND STORAGE		
Handling	 Do not disassemble or modify the battery , nor short it between the terminals. 	
	 Do not put a fire close to the battery [,] or throw it into a fire. 	

	 Handle batteries as heavy objects.
	 With vents provided in a cubicle [,] for example [,] charge the battery in a well ventilated
	room.
Storing	Choose a place that is not exposed to high temperatures \cdot high humidity \cdot wind and rain \cdot
	direct sunlight, fire, poisonous gasses, droplets, dust generation or ingress, or submersion.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION		
Engineering Controls	Store batteries with adequate ventilation. Room ventilation is also required for batteries	
	utilized for standby power generation. Never recharge batteries in an unventilated,	
	enclosed space.	
Personal Protective	During installation, normal conditions of use or in the event of battery breakage, no	
	exposure to lead and lead containing battery paste. Exposure to sulfuric acid and acid mist	
Equipment	might occur during charge.	
Eye Protection	Chemical goggles, safety glasses with side shields and or a full-face shield.	
Protective gloves	Rubber, PVC or neoprene.	
Respiratory Protection	NIOSH approved acid mist/organic vapor respirator, if OSHA PEL is exceeded.	
Other Protective	Acid resistant apron or clothes.	
Equipment		
Work Practices	Use standard lead-acid battery practices. Do not wear metallic jewelry when working with	
	batteries. Use non-conductive tools only. Discharge static electricity prior to working on a	
	battery. Maintain eyewash, fire extinguisher and emergency communication device in the	
	work area.	

9. PHYSICAL AND CHEMICAL PROPERTIES

Materials (reference)	Dilute sulfuric acid (for 1.3 of specific gravity)	Lead	ABS resin
Other appearance	Transparent liquid	Silver white solid	Black or Gray solid
Specific gravity	1.30	11.3	1.20
Boiling point	110 ℃	1,740 °C	—
Melting point	-40 °C	327 ℃	Soften point about 130-150 $^\circ\!\!\mathbb{C}$
Freezing point	-56 .4℃		—
Vapor pressure	3.17 kPa (for 30%	0.1 kPa(at 25℃)	
	concentration at $30^\circ C$)		—

10. STABILITY AND REACTIVITY

Г

Stability The battery and its contents are stable but need to avoid s	everal situations during
---	--------------------------

Revised : 2014.09.19

	usage, such as overheating, overcharging which results in acid mist and hydrogen
	generation. Hydrogen gas may be generated from overcharging, fire or at very high
	temperatures, especially CO, CO2 and Sulfur Oxides may emit during in fire. Hence,
	some materials also should be avoid placing together with batteries, for example,
	strong alkaline materials, organic solvents, or conductive metals caused sparks or open
	flame.
	Once batteries are breakage, split sulphuric acid should be careful which is corrosive,
Reactivity	nonflammable liquid (thermal decomposition at 338 $^\circ\!\mathrm{C}$ and destroys organic materials
	such as cardboard, wood, textiles and reacts with metals, producing hydrogen.

11. TOXICOLOGICAL INFORMATION

VRLA batteries are sealed, recombinant design that require no water replacement throughout their service life, thus no contact is made with the battery's internal components or chemical hazards. Under normal use and handling, these batteries do not emit regulated or hazardous substances.

Inhalation, rat	LC50 = 510 mg/m3/2H	
Oral, rat	LD50 = 2140 mg/kg	
	The International Agency on Cancer (IARCC) has classified "strong inorganic acid mists	
	containing sulfuric acid" as a category 1 carcinogen (inhalation), a substance that is	
Carcinogenicity	carcinogenic to humans. This classification does not apply to the liquid forms of sulfuric	
	acid contained within the battery. Misuse of the product, such as overcharging, may	
	result in the generation of sulfuric acid mist at high levels.	

12. ECOLOGICAL INFORMATION

This information is of relevance if the battery is broken and the ingredients are released to environment.		
Electrolyte (dilute sulfuric acid)	In order to avoid damage to the sewage system, the acid has to be neutralized by	
	means of time or sodium carbonate before disposal. Ecological damage is possible by	
	change of pH. The electrolyte solution reacts with water and organic substances,	
	causing damage to flora and fauna. The electrolyte may also contain soluble	
	components of lead that can be toxic to aquatic environments.	
	Chemical and physical treatment is required for the elimination from water. Waste water	
	containing lead must not be disposed of in an untreated condition. The former	
Lead and Lead compounds	classification of Lead compounds as toxic for the aquatic environment R50/53 had been	
	triggered from test results generated in the 80's for soluble Lead compounds (Lead	
	Acetate). The hardly soluble Lead compounds such as Battery Lead Oxide were not	
	tested at this time. Tests on Battery Lead Oxide were carried out in 2001 and 2005. The	
	respective test results conclude that Battery Lead Oxide is not toxic for the environment,	

	neither R50 nor R50/53 nor R51/53. From this it follows that the general classification		
	for Lead compounds (R50/53) does not apply to Battery Lead Oxide. As the result this the Risk Phrase R52/53 (Harmful to aquatic organisms, may cause longterm		
	adverse effects in the aquatic environment) applies to Battery Lead Oxide.		
	Effects of Battery Lead Oxide in the aquatic environment :		
	Toxicity for fish	96 h LC 50 > 100 mg/l	
	Toxicity for daphnia	48 h EC 50 > 100 mg/l	
	Toxicity for alga	72 h IC 50 > 10 mg/l	
	The results demonstrate these Battery Lead Oxide compounds in a concentration of		
	100 mg/l have no adverse effect on fish and daphnia. A concentration of these Battery Lead Oxide of 10 mg/l has no adverse effect on the rate of growth and the biomass. For the classification according to Directive 67/548/EEC the most sensitive adverse effect		
	has to be considered. As a result of the toxicity for alga at > 10 mg/l Battery Lead Oxide		
	has to be classified according to the R-Phrases 52/53 (Harmful to aquatic organisms,		
	may cause long term adverse effects in the aquatic environment).		

13. DISPOSAL CONSIDERATIONS

Spent lead acid batteries are subject to regulation of the EU Battery Directive and its adoptions into national legislation on the composition and end of life management of batteries.

Spent Lead Acid batteries are recycled in lead refineries (secondary lead smelters). The components of a spent Lead Acid battery are recycled or reprocessed.

At the points of sale, the manufacturers and importers of batteries, respectively the metal dealers take back spent batteries, and render them to the secondary lead smelters for processing.

To simplify the collection and recycling or reprocessing process, spent Lead Acid batteries must not be mixed with other batteries. By no means may the electrolyte (diluted sulfuric acid) be emptied in an inexpert manner. This process is to be carried out by the processing companies only.

14. TRANSPORT INFORMATION

Air Transportation					
Proper Shipping Name :	Batteries, wet, non-spillable				
UN Identification :	UN2800				
Hazardous Class :	8				
Yuasa VRLA batteries have been tested and meet the non-spillable criteria listed in IATA Packing Instruction 872 and					
Special Provision A67.					
These batteries are excepted from all IATA regulations provided that the battery terminals are protected against short					
circuits.					
The words "Not Restricted, as per Special Provision A67" must be included in description on the Air Waybill.					
Marine Transportation					
Proper Shipping Name :	Batteries, wet, non-spillable				

UN Identification :

Hazardous Class :

Yuasa VRLA batteries have been tested and meet the non-spillable criteria listed in IMDG Code Special Provision

238.1 and 2; therefore, are not subject to the provisions of the IMDG Code provided that the battery terminals are

protected against short circuits when packaged for transport.

UN2800

8

Transportation between USA and Canada

US DOT : No proper shipping name ; not regulated as a hazardous material.

Yuasa VRLA batteries have been tested and meet the non-spillable criteria listed in CFR 49, 173. 159 (d) (3) (i) and (ii).

Non-spillable batteries are excepted from CFR 49, Subchapter C requirements, provided that the following criteria are met :

- 1. The batteries must be protected against short circuits and securely packaged.
- 2. The batteries and their outer packaging must be plainly and durably marked "NON-SPILLABLE" or

"NONSPILLABLE BATTERY".

Additional Information :

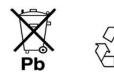

- Each battery and the outer packaging must be plainly and durably marked "Non-Spillable" or "Non-Spillable Battery".
- Transport requires proper packaging and paperwork, including the nature and quantity of goods, per applicable origin / destination / customs points as-shipped.

15. REGULATORY INFORMATION

In accordance with EU Battery Directive and the respective national legislation, Lead Acid batteries have to be

marked by a crossed out dust bin with the chemical symbol for lead shown below, together with the ISO

return/recycling symbol. If other countries or the region have time in addition the stipulation must observe.

16. OTHER INFORMATION

Sulfuric acid is water-reactive if concentrated. The following battery compositions is listed in TSCA (Toxic Substance Control Act (U.S.A.)) Components CAS No TSCA lists the state sulfuric acid $(H_2SO_4+H_2O)$ 7664-93-9 Listed Electrolyte Lead (Pb) 7439-92-1 Listed lead compounds (PbO₂) 1317-36-8 Listed Lead sulfate (PbSO₄) 7446-14-2 Listed Inorganic lead Compound Calcium (Ca) 7440-70-2 Listed Tin (Sn) 7440-31-5 Listed Barium (Ba) 7440-39-3 Listed
